Data Structures and Algorithms 1

Manal ElZant-Karray

Practical work n°2 : Algorithm and Introduction to C

Exercise 1: Study the follow flowchart and represent it in an algorithm steps and in C program.

Exercise 2: Write a C program to convert seconds to minutes and seconds.

Exercise 3: Write a C program that gives a temperature in degrees Celsius from a

Fahrenheit temperature (C = (5/9) * (F - 32)).

Exercise 4: Write a C program that tests if a character entered by the user is a number or if it is a low case letter (between 'a' and 'z') or an upper case letter (between 'A' and 'Z').

Exercise 5: Write a C program using the *Switch instruction* that reads a character (using the function getchar()) and which displays :

- "one" if the character '1' has been entered,
- "two" if it is the character '2',
- "three" if it is 3' and
- "other character" otherwise.

Exercise 6: Write a C program to find the smallest of three numbers:

1. Ask the user to enter the numbers
2. Search for the smallest number,
3. Display it.

PS: Don't use array, just conditions statements!
Add to your program:

1. Display the sum of the three numbers
2. Find and display the **largest** of three numbers
